## Course Syllabus

### *Electronics and Robotics* *2021- 2022*

***Instructor: Br. R.W. Harris***

***Email: br.harris@ionaprep.org***

***Phone: 914-632-0714 x 278***

***Extra Help Schedule: by appointment every day 3-4 PM.***

**Course description:** This is a senior elective course involving the construction of electronic circuits, the programming of a microcontroller, and the construction of a robot controlled by the microcontroller.

This course will explore the basics of electronics and electronic circuits with an emphasis on their application in sensing the environment and controlling the motion of a robot. Since much digital circuitry is controlled by software, the development and debugging of appropriate software will also be covered in as much detail as time permits.

Requirements: Each student must have a properly functioning PC/MAC/Chromebook computer with Internet access and an available, functioning USB port. The computer must be able to run the Parallax software. Each student must have a notebook for the course. They will be allowed to use this notebook on at least some tests and on all projects.

#### **LEARNING GOALS**

At the end of this course, students will have the following **understandings, knowledge, and skills**:

- Understand the basic behavior of resistors, capacitors, diodes, integrated circuits, motors, servos, and a variety of sensors.
- Be able to construct a moderately complex circuit when provided with a schematic diagram and appropriate components.
- Be able to use appropriate reference materials to write a program to control a simple robot. The first programming language will be BLOCKLY. The underlying programming language for the course is C.
- Understand multiprocessing and be able to use it appropriately in a complex program.
- Be able to debug a malfunctioning Blockly program.
- Have an understanding of basic binary logic and digital circuitry.
- Have become competent in the use of a digital multi-meter, breadboard, and assorted electronic components.

## TEXTS & MATERIALS

There is no printed text for this course. Tutorials and reference materials are all online. For that reason, each student must have a PC or MAC which can access the Internet and has a USB port available and can run the Parallax software.

### Quarter 1

Topic	Text
Intro. to programming: Binary numbers, Programming a minicomputer. (PDP-8I)	Chapter 0 - Local Publication
Building and controlling an LED circuit	Online Tutorial
Digital Input	Online Tutorial
Controlling the motion of a servo	Online Tutorial
CAD and 3D printing (optional topic)	

### Quarter 2

Topic	Text
Measuring rotation; the potentiometer	Online Tutorial
Digital Display 7-segment	Online Tutorial
Measuring Light	Online Tutorial
Frequency and Sound	Online Tutorial
OLED display	Online Tutorial

### Quarter 3

Topic	Text
Building the Activity Bot	Online Tutorial
Navigation basics (dead reckoning)	Online Tutorial
Use of Whiskers and sonar	Online Tutorial
Use of Infrared Headlights (optional topic)	Online Tutorial

### Quarter 4

Topic	Text
Groups choose projects from a list of possibilities which include Activity-Bot extensions and other more advanced robotics applications. Alternately, a group may propose an original project.	Reference materials will depend upon the individual project.

## RUBRIC

This will vary from project to project. The rubric will be explained when the project is assigned.

## ASSESSMENT

Tests may be either written or “performance.”

In a performance test, the student is given an assignment which usually will involve building and programming a device to perform a specific task.

Later projects often have a competitive component.

#	Assessment	% Of Quarter Grade
3-5	Tests	100%

## ATTENDANCE AND LATE WORK

When a student is absent for a test, he is expected to take the test on the date of his return, unless a mutually acceptable agreement is decided upon by the teacher and student.

Due to the pace and the amount of material covered in this course, it is imperative that assignments be completed on time. If a student does not have a properly functioning computer in class every day he will find it difficult, if not impossible, to accomplish the work and his grade will be adversely affected.

## Academic Integrity Policy

Iona Prep's Academic Integrity Policy is simple: Cheating, in any guise **whether giving or receiving information**, is morally wrong and will not be tolerated. As a Catholic community, it is vital that each member appreciates and practices a strong code of ethics.

## CHEATING ON EXAMS AND PLAGIARISM

Plagiarism is the “use or close imitation of the language and thoughts of another author and the representation of them as one’s own original work.” Don’t do it. Work deemed as plagiarism will receive zero credit. The full policy is located

here: <https://docs.google.com/document/d/112hksR9xG77x5FSEG0g0gMC7pLTvmynhE nsR1I1aLkg/edit?usp=sharing>

**Distance learning:** If we are in distance learning, please refer to the distance learning policy in the handbook.
